INOGEN AVIATOR™ IN-FLIGHT OXYGEN SYSTEM

Sold Exclusively By WINDBLADE Corp

The Inogen Aviator is a lightweight, in-flight pulse oxygen system for the general aviation community. Currently tested up to 13,500', the Inogen Aviator can either run off a cigarette lighter power interface or a 12 cell or 24 cell battery (up to 3 or 6 hours respectively).

"Having an essentially inexhaustible supply of O2 on board changes your thinking. Flying at 10,000 feet, you don't hesitate to use it. Cruising above 5000 feet at night? You won't give O2 use a second thought."

~ Marc Cook - KITPLANES Magazine
November 1st, 2010
